### Research Summary

Granite is an igneous rock characterized by its coarse-grained texture and predominantly composed of minerals such as quartz, feldspar, and mica. It forms through the slow crystallization of magma beneath the Earth's surface, resulting in a durable and visually striking rock. Quartz, typically clear or milky white, lends hardness to granite, while feldspar imparts varying colors, often shades of pink, gray, or beige. Mica contributes a reflective quality to the stone. Granite is widely used in construction and as a dimension stone due to its strength, resistance to abrasion, and aesthetically pleasing appearance.
