Research Summary

Granulator knives are cutting tools used in granulation processes, particularly in the plastics industry. Granulators are machines designed to break down plastic materials into smaller, more manageable particles or granules. The granulator knives play a crucial role in this process by cutting and shearing the plastic material into the desired size. These knives are typically made from high-quality tool steels or other durable materials to withstand the abrasion and wear associated with cutting through plastic. They come in various shapes and configurations, depending on the specific requirements of the granulation process and the type of plastic being processed. Regular maintenance and sharpening of granulator knives are essential to ensure efficient and precise cutting, as dull or damaged knives can negatively impact the granulation process and the quality of the end product.

The major global manufacturers of Granulator Knives include D&S, SIJ Ravne Systems, TRO Cutting Tools, Pilana, Fernite of Sheffield, Great Lakes Industrial Knife, Zenith Cutter, OVS, International Knife & Saw, Povelato, D. B. Engineering, LUTZ BLADES,
