Research Summary

Graphene oxide (GO) powder and dispersion are forms of graphene-based materials with unique properties and widespread applications. GO powder consists of graphene sheets functionalized with oxygen-containing groups, synthesized through chemical oxidation and exfoliation processes. It offers excellent dispersibility in water and other solvents, making it suitable for applications such as membranes, coatings, composites, and energy storage devices. Graphene oxide dispersion, on the other hand, is a colloidal suspension of GO powder in a liquid medium, prepared by dispersing GO powder into solvents using techniques like ultrasonication or mechanical stirring. These dispersions are versatile platforms used in coatings, inks, paints, biomedical materials, and sensors, offering enhanced mechanical, electrical, thermal, and barrier properties for various industrial applications.

The major global manufacturers of Graphene Oxide Powder And Dispersion include Changzhou Fuxi Technology, Global Graphene Group, Graphenea, Abalonyx AS,
