Research Summary

Graphite recarburizer, often simply referred to as recarburizer, is a carbonaceous material used in the steelmaking and foundry industries to introduce carbon content into molten metal, primarily in the form of iron. It is commonly added to adjust the carbon content in the production of steel and iron alloys, ensuring the desired mechanical and metallurgical properties. Graphite recarburizers are typically made from high-quality graphite materials, offering consistent carbon content and efficient carbon dissolution. This process aids in controlling the final composition of the metal and optimizing its performance. Graphite recarburizers play a crucial role in achieving precise carbon levels, reducing impurities, and enhancing the quality of the final steel or iron product in metallurgical processes. The use of graphite recarburizers contributes to the overall efficiency and consistency in steel production.

The major global manufacturers of Graphite Recarburizer include James Durrans Group, Richard Anton, Elkem ASA, Superior Graphite, FOSET, Henan Yuzhong Ferroalloy, Guangxing Electronic, Jiangxi Ningxin New Materials, Braide Graphite
