Research Summary

Green composites, also known as eco-composites or sustainable composites, are composite materials made from natural, renewable, and/or recycled resources, with a focus on reducing environmental impact throughout their lifecycle. These materials typically combine a matrix, such as biodegradable polymers or plant-based resins, with reinforcing fibers derived from sources like bamboo, hemp, flax, or recycled materials like reclaimed wood or recycled plastics. Green composites offer several advantages, including lower carbon footprint, reduced dependency on finite resources, and improved biodegradability compared to traditional composites made from fossil fuel-derived materials. They find applications in various industries, including automotive, construction, packaging, and consumer goods, contributing to the development of more sustainable and environmentally friendly products.

The major global manufacturers of Green Composites include Trex Company, The AZEK Company, Fiberon, Avient, Oldcastle Architectural, Anhui Sentai WPC Group, UPM Biocomposites, Tecnaro GmbH, TTS Inc, FlexForm Technologies, Procotex
