### Research Summary

Green methane, also known as biomethane or renewable methane, is a sustainable form of methane gas produced from renewable sources such as organic waste, biomass, or renewable electricity. Unlike traditional methane derived from fossil fuels, green methane is considered environmentally friendly as it does not contribute to net carbon emissions. It can be produced through processes like anaerobic digestion of organic materials, where microorganisms break down waste to produce biogas, which is then upgraded to biomethane, or through power-to-gas technologies, where renewable electricity is used to produce hydrogen, which is then combined with captured carbon dioxide to form methane. Green methane offers a renewable and carbon-neutral energy source with applications in heating, electricity generation, transportation, and industrial processes, contributing to a more sustainable and low-carbon energy future.

The major global manufacturers of Green Methane include Clean Energy Fuels, Archaea Energy, Montauk Renewables, VERBIO, Vanguard Renewables, J V Energen, Future Biogas, Dominion Energy, Deqingyuan, California Bioenergy, Waga Energy,

Ameresco, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
