### Research Summary

Green methanol refers to methanol produced using environmentally sustainable and renewable resources, typically derived from sources such as biomass, carbon dioxide (CO<sub>2</sub>) captured from the atmosphere or industrial processes, or green hydrogen obtained through renewable-powered electrolysis. The production of green methanol aims to reduce reliance on fossil fuels and decrease carbon emissions compared to conventional methanol manufacturing processes, which often involve natural gas or coal. The use of renewable feedstocks and sustainable production methods makes green methanol a more environmentally friendly alternative. It can serve as a clean-burning fuel or as a versatile chemical feedstock for various industries, contributing to efforts to achieve a more sustainable and low-carbon economy. Green methanol holds promise as a component in strategies for decarbonizing transportation, industry, and energy sectors, aligning with global goals to address climate change and reduce the environmental impact of chemical processes.

The major global manufacturers of Green Methanol include OCI N.V., Methanex, Enerkem, S?dra, BASF, Alberta Pacific, Carbon Recycling International, etc. The global
