Research Summary

Green petroleum coke and calcined petroleum coke are both derived from the refining of crude oil but serve different purposes. Green petroleum coke is a carbon-rich solid material that results from the distillation of crude oil during the refining process. It contains impurities and moisture and is typically used as a fuel in various industrial applications. On the other hand, calcined petroleum coke is produced by heating green petroleum coke to remove volatile components and moisture. This process, called calcination, results in a higher carbon content and improved physical properties, making calcined petroleum coke a key raw material in the production of anodes for aluminum smelting and other high-value carbon applications. Both green and calcined petroleum coke play essential roles in different industrial processes, with calcined petroleum coke being particularly crucial in the production of aluminum and steel. Efforts to produce these materials sustainably and reduce their environmental impact are ongoing, including exploring alternative feedstocks and adopting more energy-efficient processes in their production.

The major global manufacturers of Green Petroleum Coke & Calcined Petroleum Coke include Sinopec, Valero, Reliance, Shell, ExxonMobil, CNPC, Chevron, Saudi Aramco, Marathon Petroleum Corporation, Oxbow, RAIN CARBON, ConocoPhillips, PBF Energy, LyondellBasell, BP, etc. The global players competition landscape in this report is divided into three tiers.
