Research Summary

A green sand molding machine is a type of foundry equipment used in the casting process to create molds for metal casting. The "green sand" in the name refers to the sand mix used in the molding process, which is a blend of sand, clay, water, and sometimes other additives. The green sand molding machine works by compacting this mixture around a pattern or mold to create a cavity in the desired shape of the final metal part. Once the mold is formed, molten metal is poured into it, and after solidification, the mold is broken away to reveal the finished casting. Green sand molding is a widely used and versatile method in foundries for producing various metal components, and the molding machine automates and streamlines the process, enhancing efficiency and precision in the production of castings.

The major global manufacturers of Green Sand Molding Machine include Sinto, DISA, Baoding Well, Loramendi (Mondragon), K?NKEL WAGNER, Tokyu, Koyo, Hunter Foundry Machinery Corporation, K?ttner Savelli, SUZHU Foundry Machinery, Juzhu Intelligent Technology, Guangdong Zhongzhu Machinery Equipment, etc. The global
