Research Summary

Grouting material refers to a mixture or substance used in the process of grouting, which involves injecting a fluid material into the voids, cracks, or spaces between structures, typically in construction or geotechnical applications. Grouting serves various purposes, including soil stabilization, waterproofing, and structural reinforcement. The grouting material is selected based on the specific requirements of the project, and it can be cementitious, resin-based, or chemical grout. Cementitious grouting materials usually consist of cement, water, and additives, forming a paste that hardens over time. Resin-based grouts involve the use of polymers or epoxy resins, providing additional strength and flexibility. Chemical grouts are often used for soil improvement and involve the injection of chemicals to alter the soil's properties. The choice of grouting material depends on factors such as the type of structure, soil conditions, and desired outcomes, with the goal of enhancing the stability and integrity of the construction or geological formation.

The major global manufacturers of Grouting Material include Sika, Fosroc, LATICRETE,

Custom Building Products, ITW Wind Group, GCP Applied Technologies, Mapei, Ambex Concrete Technologies, CICO Technologies (CTL), Five Star Products, Jinqi Chemical Group, Fischer Spezialbaustoffe, Nanjiang, A.W.
