Research Summary

Guanine is one of the four main nucleobases found in the nucleic acids DNA and RNA, where it pairs with cytosine. As a purine derivative, guanine consists of a fused double-ring structure comprising carbon and nitrogen atoms. In the context of genetics, guanine plays a critical role in encoding genetic information and facilitating the transmission of this information during cell replication and protein synthesis. Beyond its genetic function, guanine derivatives are involved in various biochemical processes, such as energy transfer and signal transduction. Guanine is also known for its presence in guano (bird droppings) and fish scales, where it is responsible for the iridescent sheen due to its crystalline structure. This nucleobase is essential for the proper functioning of all living cells and the preservation of genetic integrity.

The major global manufacturers of Guanine include ALB Technology, Alfa Aesar, Biosynth Carbosynth, Glentham Life Sciences Limited, P C Chem, Pharmaffiliates, SynZeal Research, etc. The global players competition landscape in this report is divided into three tiers.
