### Research Summary

Hadoop is an open-source framework designed for the distributed storage and processing of large data sets across clusters of commodity hardware. Developed by the Apache Software Foundation, Hadoop is based on a few key components, notably the Hadoop Distributed File System (HDFS) for storage and the MapReduce programming model for processing and analyzing data. Hadoop allows for scalable and fault-tolerant handling of massive amounts of data by distributing it across multiple nodes in a cluster. It enables parallel processing and efficient data storage, making it well-suited for big data applications where traditional databases may struggle. Hadoop has become a cornerstone in the field of big data analytics, providing the infrastructure for organizations to store, manage, and analyze vast datasets in a cost-effective and scalable manner. Additionally, the Hadoop ecosystem has expanded to include various complementary tools and projects, such as Apache Hive, Apache Spark, and Apache HBase, further enhancing its capabilities for diverse data processing needs.

The major global suppliers of Hadoop include Cloudera, Hortonworks, MapR Tech, Dell/EMC/Pivotal, IBM, Amazon Web Services, Microsoft, etc. The global players
