Research Summary

Halloysite is a naturally occurring aluminosilicate clay mineral with a unique tubular structure. It belongs to the kaolin group and is composed of stacked nanoscale tubes or cylinders. The tubes are hollow and have an inner lumen and an outer surface. Halloysite is typically found in association with other clay minerals and is known for its white to off-white color. Due to its tubular structure and high surface area, halloysite has garnered interest in various industrial applications, including as a filler in the production of ceramics, polymers, and nanocomposites. The inner lumen of the tubes can be loaded with different materials, making halloysite a carrier for controlled release in drug delivery and other encapsulation applications. Its properties make halloysite a versatile and valuable material in fields ranging from materials science to biotechnology.

The major global manufacturers of Halloysite include Imerys Ceramic, Applied Minerals, I-Minerals, PTH Intermark, Eczac?ba??
