Research Summary

Hand soldering is a manual soldering process in electronics assembly and manufacturing where solder is applied to connect components on a circuit board using a soldering iron or soldering gun. This technique involves melting a solder alloy, typically a mixture of tin and lead or other lead-free alternatives, and applying it to the joint between electronic components and the circuit board. The solder solidifies to create a strong and reliable electrical connection. Hand soldering is a precise skill that requires careful control of temperature, solder flow, and timing to ensure proper joint formation without damaging sensitive electronic components. This method is commonly used for prototypes, low-volume production, and repairs in situations where automated soldering processes may be impractical or cost-prohibitive. Skilled technicians and engineers often use hand soldering for its versatility and ability to handle intricate and delicate soldering tasks.

The major global manufacturers of Hand Soldering include Weller (Apex Tool Group), HAKKO, JBC, Kurtz Ersa, QUICK Soldering, Metcal (OK International), GOOT (Taiyo
