Research Summary

Handling, degating, and deflashing robots are specialized robotic systems designed for tasks related to the post-molding processes in manufacturing. In injection molding or casting operations, products often have excess material such as gates, flash, or burrs that need to be removed for the final product to meet quality standards. Handling robots are equipped with end-of-arm tools to pick, place, and manipulate molded or cast components. Degating robots focus on the removal of gates, which are the excess material that connects the product to the molding or casting sprue. Deflashing robots are designed to remove flash, which is excess material that forms along the parting lines of molds. These robots contribute to the automation of labor-intensive and repetitive processes, enhancing efficiency, consistency, and product quality in manufacturing operations. The integration of these robotic systems is common in industries such as automotive, electronics, and consumer goods where precision and consistency in post-molding processes are critical.

The major global manufacturers of Handling, Degating, and Deflashing Robots include FANUC, ABB, Yaskawa, KUKA, Kawasaki, Nachi-Fujikoshi, Staubli, Mitsubishi, Yamaha, Epson, DAIHEN Corporation, Denso, Panasonic, etc. The global players competition landscape in this report is divided into three tiers.
