Research Summary

Hard chrome plating is a surface finishing technique used to deposit a layer of chromium onto metal substrates, typically steel or other ferrous alloys. This electroplating process involves immersing the metal object to be plated in a chromium plating solution and passing an electrical current through it. Chromium ions in the solution are attracted to the surface of the object, where they form a thin layer of chromium metal through reduction reactions. The resulting hard chrome layer provides enhanced surface properties, including hardness, wear resistance, corrosion resistance, and lubricity, making it ideal for applications where components are subjected to high levels of wear and abrasion, such as hydraulic cylinders, pistons, shafts, molds, and industrial machinery parts.

The major global manufacturers of Hard Chrome Plating include Element Solutions, Atotech, Hausner Hard Chrome, CCA Hardchrome, Omori Chrome Industry Co., Ltd., Trinity Holdings, US Chrome, Electro-Coatings, Verbrugge, Pioneer Metal Finishing, Suzuki High-tech, AustChrome, Youngstown Hard Chrome Plating & Grinding, Henan
