### Research Summary

A hard disk, commonly known as a hard drive or HDD (Hard Disk Drive), is a non-volatile data storage device that is used in computers and other electronic devices. It consists of one or more rigid disks coated with a magnetic material, which store digital data using magnetic patterns. The hard disk's read/write heads access and modify data on these spinning disks, allowing for the storage and retrieval of large amounts of information. Hard disks are widely used as primary storage in computers for operating systems, software, and user data due to their relatively large capacity, cost-effectiveness, and non-volatile nature, meaning they retain data even when powered off. However, advancements in technology have also led to the rise of solid-state drives (SSDs), which, although more expensive, offer faster data access speeds and greater durability as they have no moving parts.

The major global manufacturers of Hard Disc include Western Digital, Seagate, Toshiba, Hitachi, Intel, Samsung, Sandisk, Micron, Liteon, Fusion-Io, Kingston Digital, Plextor, Corsair, Galaxy Technology, Shinedisk, Biwin, Adata, etc. The global players competition landscape in this report is divided into three tiers.
