Research Summary

A Harmonic Drive, also known as a strain wave gear or harmonic gear drive, is a type of precision mechanical gear system used in robotics, automation, and other applications where precise and compact motion control is essential. It consists of three main components: a wave generator, a flexspline (also known as a harmonic flexspline), and a circular spline. The unique design of a Harmonic Drive allows for high gear reduction ratios, precise motion control, and zero backlash, making it well-suited for applications requiring high precision and compact form factors. The gear system operates by flexing a deformable spline, which causes the circular spline to move in a controlled way. This technology is widely used in robotic joints, aerospace systems, medical devices, and other applications where high precision and compact design are critical factors.

The major global manufacturers of Harmonic Drive include HDSI, Leaderdrive, Beijing CTKM Harmonic Drive, BHDI, Zhejiang Laifual, Nidec-Shimpo, BENRUN Robot, Cone Drive, etc. The global players competition landscape in this report is divided into three tiers.
