Research Summary

HCFC-142b, or hydrochlorofluorocarbon-142b, is a chemical compound that belongs to the class of halogenated hydrocarbons. It is part of the hydrochlorofluorocarbon family, which is used primarily as a refrigerant in various applications such as air conditioning and refrigeration systems. HCFC-142b has been employed as a substitute for chlorofluorocarbons (CFCs) that have a more significant ozone-depleting potential. While HCFCs, including HCFC-142b, have lower ozone-depleting potential than CFCs, they are still considered contributors to ozone layer depletion. Consequently, international agreements such as the Montreal Protocol have been established to phase out the production and use of substances like HCFC-142b to protect the Earth's ozone layer and mitigate environmental harm. The phase-out of HCFCs is part of global efforts to transition toward more environmentally friendly and ozone-safe alternatives in refrigeration and air conditioning systems.

The major global manufacturers of HCFC-142b include Arkema, Shandong Dongyue, Shandong Lecron, Zhejiang Juhua, Shanghai Huayi 3F, Zhejiang Sanmei, Sinochem
