### Research Summary

Heart defect closure devices are medical devices designed to treat congenital heart defects, specifically atrial septal defects (ASDs) and patent foramen ovale (PFO). These defects involve abnormal openings between the chambers of the heart. Heart defect closure devices are typically delivered through minimally invasive procedures, such as cardiac catheterization, avoiding the need for open-heart surgery. The device is guided to the heart defect, deployed to close the opening, and remains permanently in place. The closure helps prevent abnormal blood flow between the heart chambers, reducing the risk of complications such as blood clots, strokes, or other cardiovascular issues. The use of these devices has become a common and effective approach in managing certain congenital heart conditions, offering patients a less invasive alternative to traditional surgical interventions.

The major global manufacturers of Heart Defect Closure Devices include Abbott, W.L. Gore, Medtronic Plc., Boston Scientific Corporation, St. Jude Medical,, Biosense Webster,, Lifetech Scientific, Starway Medical Technology,, Cardia,, Occlutech Holding,
