Research Summary

A heart rate belt, also known as a chest strap or heart rate monitor, is a wearable device designed to measure and monitor an individual's heart rate during physical activity. It typically consists of an elastic strap that is worn around the chest, with a sensor located on the front of the strap that detects the electrical signals produced by the heart. These signals are transmitted wirelessly to a compatible device, such as a smartphone, smartwatch, or fitness tracker, which then displays the user's heart rate in real-time. Heart rate belts are widely used by athletes, fitness enthusiasts, and individuals engaged in various forms of exercise to track their intensity levels, optimize their workouts, and monitor their cardiovascular health.
