Research Summary

Heat Dissipation Paste, commonly known as thermal paste or thermal compound, is a substance applied between the surfaces of electronic components, such as a computer processor and its heat sink, to improve the efficiency of heat transfer. Its primary function is to fill microscopic gaps and irregularities between the two surfaces, ensuring better thermal conductivity and enhancing the dissipation of heat generated during operation. Composed of thermally conductive materials, such as silicones or metal oxides, heat dissipation paste helps minimize the thermal resistance between the electronic component and the heat sink, preventing overheating and maintaining optimal operating temperatures. This is particularly crucial in high-performance computing and electronic devices where efficient heat management is essential for sustained performance and longevity.

The major global manufacturers of Heat Dissipation Paste (HD Paste) include Dow, Panasonic, Parker Hannifin, Shin-Etsu Chemical, Henkel, Fujipoly, DuPont, Aavid (Boyd Corporation), 3M, Wacker, H.B. Fuller Company, Denka Company Limited, Dexerials
