Research Summary

Heat shrink terminals and splices are electrical connectors designed for secure and insulated wire connections. These components are made from materials that undergo a heat-induced shrinking process, typically polyolefin or other polymer materials. The heat shrink terminals and splices are placed over the ends of wires or cables, and upon applying heat, they shrink to form a tight and protective seal around the connection point. This not only ensures a reliable electrical connection but also provides insulation, protecting against moisture, corrosion, and other environmental factors. Heat shrink terminals and splices are commonly used in electrical and electronic applications, offering a convenient and effective method for creating durable, moisture-resistant, and vibration-resistant wire connections in various settings, from automotive and marine applications to industrial and household electrical projects.

The major global manufacturers of Heat Shrink Terminals and Splices include Molex, TE Connectivity, 3M, Panduit, ABB (T&B), Fuji Terminal, Shawcor (DSG-Canusa), K.S. TERMINALS, Nichifu, Hubbell (Burndy), NSPA (National Standard Parts Associates),
