Research Summary

Heat-strengthened glass is a type of safety glass that undergoes a controlled heating and cooling process to enhance its strength compared to regular annealed glass. During the heat-strengthening process, the glass is heated to a temperature just below its softening point and then rapidly cooled. This induces compressive stresses on the glass surfaces while maintaining its flat shape. While not as strong as fully tempered glass, heat-strengthened glass is more durable than annealed glass and, in the event of breakage, tends to break into larger, safer fragments rather than sharp shards. This makes it a suitable choice for applications where safety is a concern, such as building facades, curtain walls, and certain architectural or structural elements. Heat-strengthened glass provides a balance between strength and safety, offering a compromise for applications that don't require the higher impact resistance of fully tempered glass but still benefit from improved durability.

The major global manufacturers of Heat Strengthened Glass include AGC, Saint-Gobain, Guardian Industries, Vitro Architectural Glass, Metro Performance Glass,

Taiwan Glass, Xinyi Glass, China Southern Glass, Fuyao, Shanghai Yaohua, etc. The global players competition landscape in this report is divided into three tiers.
