Research Summary

Heavy plates refer to large and thick steel plates used in various industrial applications, particularly in construction, manufacturing, shipbuilding, and energy sectors. These plates are characterized by their significant thickness, often ranging from 6 to 150 millimeters or more, and substantial weight. Heavy plates are commonly made from structural-grade carbon steel or alloy steel, and their robustness makes them suitable for critical components in infrastructure projects, pressure vessels, offshore structures, and machinery requiring high-strength materials. These plates undergo precise manufacturing processes such as rolling and heat treatment to ensure uniformity, durability, and compliance with stringent quality standards. Due to their strength and versatility, heavy plates are integral in the construction of bridges, buildings, storage tanks, and other structures where structural integrity and load-bearing capacity are paramount.

The major global manufacturers of Heavy Plates include Tisco, Arcelormittal, ThyssenKrupp, EVRAZ, Nucor, SSAB, Outokumpu, Posco, Baosteel, Yusco, Acerinox, Jindal, Aperam, LISC, AK Steel, NSSC, JF, JISCO, etc. The global players competition
