Research Summary

A helicopter simulator is a sophisticated training device designed to replicate the operation of a helicopter in a realistic and controlled environment. These simulators use advanced computer technology, motion systems, and realistic visual displays to provide aspiring or experienced helicopter pilots with a simulated flying experience. Helicopter simulators aim to mimic various flight conditions, emergency scenarios, and operational environments, allowing pilots to practice and hone their skills without the risks associated with actual flight. They typically feature replica helicopter controls, including collective and cyclic pitch controls, and offer a high-fidelity experience by simulating the physics of helicopter flight. Helicopter simulators are widely used in pilot training programs, allowing trainees to familiarize themselves with different helicopter models, practice maneuvers, and develop their decision-making skills in a safe and controlled setting.

The major global manufacturers of Helicopter Simulator include CAE, Thales, FlightSafety International, Reiser Simulation and Training, Indra, Textron, VRM, AVIC,
