### Research Summary

Hemodialysis solution, also known as dialysate, is a specialized fluid used in hemodialysis machines to facilitate the removal of waste products and excess fluids from the bloodstream during hemodialysis treatment. This solution is carefully formulated to mimic the electrolyte composition of healthy blood, containing specific concentrations of sodium, potassium, calcium, bicarbonate, and other essential components. During hemodialysis, the dialysate flows through the dialyzer, a semipermeable membrane that separates the patient's blood from the dialysate. This allows for the exchange of solutes and fluids, enabling the removal of toxins and maintaining the body's electrolyte balance. The composition of hemodialysis solution is a critical factor in the effectiveness of the treatment, and it is adjusted based on the patient's individual needs and the specific goals of the dialysis session.

The major global manufacturers of Hemodialysis Solution include Baxter Healthcare Trading (Shanghai), Jiangxi Sanxin Medtec, Guangdong Biolight Meditech, Shandong Weigaopharmaceutical, Guangzhou Koncen Biotechnology, Tianjin Minxiang
