Research Summary

A hemoperfusion cartridge is a medical device used in hemoperfusion therapy, a treatment method designed to remove toxins and substances from the blood. The cartridge typically contains an adsorbent material, such as activated charcoal or resin, which selectively binds and removes specific toxins or drugs circulating in the bloodstream. During hemoperfusion, blood is circulated through the cartridge, allowing the adsorbent material to capture and eliminate targeted substances. Hemoperfusion is commonly employed in the management of certain poisonings, drug overdoses, or as a supportive therapy in specific medical conditions where traditional treatments may be inadequate. The hemoperfusion cartridge plays a critical role in facilitating the extracorporeal purification of blood and enhancing the body's ability to eliminate harmful substances, contributing to the overall success of the therapeutic intervention.

The major global manufacturers of Hemoperfusion Cartridge include Baxter International, Asahi Kasei Corporation, Toray Medical, Jafron Biomedical, CytoSorbents, Kaneka Medix Corporation, Baihe Medical, etc. The global players
