### Research Summary

A hemoperfusion device is a medical apparatus designed for hemoperfusion therapy, a process that involves the removal of toxins and harmful substances from the blood. This device typically includes a hemoperfusion cartridge containing adsorbent materials like activated charcoal or resin. During the procedure, a patient's blood is circulated through the cartridge, where these adsorbents selectively capture and eliminate specific toxins from the bloodstream. The hemoperfusion device facilitates the extracorporeal purification of blood, providing a targeted and efficient method to remove toxins. This therapeutic approach is often employed in cases of poisoning, drug overdoses, or situations where conventional treatments may be insufficient. Hemoperfusion devices play a crucial role in supporting patients by rapidly and effectively clearing harmful substances from their blood, contributing to the overall success of the treatment.

The major global manufacturers of Hemoperfusion Device include Jafron Biomedical, Baxter (Gambro), Biosun Medical, Toray Medical, Asahi-Kasei, Kaneka, Zibo Kangbei, Aier, Cytosorbents, etc. The global players competition landscape in this report is
