Research Summary

A HeNe (helium-neon) laser is a type of gas laser that emits visible red light at a wavelength of 632.8 nanometers. It operates by exciting helium and neon gas within a sealed tube using an electrical discharge. The excited atoms release photons as they return to their lower energy state, producing a coherent and monochromatic laser beam. HeNe lasers are known for their stability, low divergence, and well-defined wavelength, making them valuable in various applications such as scientific research, educational demonstrations, and alignment purposes. While their popularity has diminished in some applications due to the development of more efficient and compact laser technologies, HeNe lasers remain appreciated for their simplicity and reliability in specific precision tasks.

The major global manufacturers of Hene Laser include Lumentum, Thorlabs, ArtisanTG, Newport Corporation, Pacific Lasertec (Melles Griot), REO, Neoark, LASOS, PHYWE, Jiangxi Shengsheng Technology, etc. The global players competition landscape in this report is divided into three tiers.
