Research Summary

Hernia repair mesh is a medical device used in surgical procedures to reinforce weakened or damaged tissue during hernia repair. Hernias occur when an organ or fatty tissue squeezes through a weak spot or opening in the surrounding muscle or connective tissue, creating a bulge. Surgical intervention often involves placing a mesh over the weakened area to provide additional support and prevent the recurrence of the hernia. These meshes can be made from various materials, including synthetic polymers or biologic tissues. Synthetic meshes are durable and designed to remain in the body permanently, while biologic meshes may be derived from animal or human tissues and gradually incorporate into the patient's own tissue over time. The use of hernia repair mesh is a common practice in modern hernia surgeries and is intended to improve the overall success rates of hernia repairs by providing structural reinforcement to the weakened abdominal wall.

The major global manufacturers of Hernia Repair Mesh include Atrium Medical (HJ Capital 1), Bard (BD), B Braun, Johnson & Johnson, Gore Medical, Medtronic, TELA
