Research Summary

Hernia surgical mesh implants are medical devices used in hernia repair surgeries to reinforce weakened or damaged tissue and prevent the recurrence of hernias. These implants are typically made of synthetic materials such as polypropylene, polyester, or absorbable polymers, and they come in various shapes, sizes, and configurations to accommodate different types of hernias and surgical techniques. Hernia surgical mesh implants are placed over or under the hernia defect during surgery to provide additional support and facilitate tissue ingrowth, allowing the patient's own tissues to grow into the mesh and strengthen the repair. These implants may be permanent or absorbable, depending on the patient's needs and the surgical approach used. Hernia surgical mesh implants are widely used in hernia repair surgeries, including inguinal hernia repair, ventral hernia repair, and umbilical hernia repair, to improve outcomes, reduce recurrence rates, and minimize postoperative complications. However, the use of hernia mesh implants has been associated with certain risks and complications, including infection, pain, mesh migration, and adhesion formation, and their use should be carefully evaluated based on individual patient factors and surgical considerations.

The major global manufacturers of Hernia Surgical Mesh Implants include Atrium Medical (HJ Capital 1), Bard (BD), B Braun, Johnson & Johnson, Gore Medical, Medtronic, Allergan, TELA Bio, Integra LifeSciences, Cook Biotech, Hernimesh, FEG Textiltechnik, Tianzhu Changyun Medical Technology, etc. The global players competition landscape in this report is divided into three tiers.
