Research Summary

Hexachloroethane, with the chemical formula C_2Cl_6 and CAS (Chemical Abstracts Service) number 67-72-1, is a chlorinated hydrocarbon compound. This white crystalline solid has been historically used for various industrial purposes, including as a smoke agent in military applications and as a raw material in the production of certain chemicals. Hexachloroethane was once employed in smoke grenades due to its ability to generate dense white smoke upon combustion. However, its use for this purpose has diminished over the years due to environmental and health concerns associated with the release of chlorinated byproducts. Additionally, hexachloroethane has been used in metallurgy for the production of zinc and aluminum. While its applications have decreased, it's important to note that hexachloroethane poses environmental and health risks, and its use is regulated in many regions.

The major global manufacturers of Hexachloroethane (CAS 67-72-1) include Scottish Chemical Industries, Teja Matallurgicals and Chemicals, Changshu Zhenfu New Materials, Nantong Donggang Chemical, etc. The global players competition landscape
