Research Summary

Hexafluoropropylene oxide (HFPO), with the chemical formula C_3F_6O , is a fluorinated compound and the monomer used in the production of per- and polyfluoroalkyl substances (PFAS). Specifically, HFPO is a key building block in the synthesis of perfluorooctanoic acid (PFOA), a well-known PFAS that has raised environmental and health concerns due to its persistence and potential adverse effects. HFPO is used in industrial processes to manufacture a variety of products, including non-stick coatings, water and oil repellents, and firefighting foam. The environmental persistence of PFAS has led to increased scrutiny and regulatory measures to limit their use and release. As a result, there is ongoing research and efforts to develop alternative, more environmentally friendly materials and processes in various industries where PFAS have traditionally been employed.

The major global manufacturers of Hexafluoropropylene Oxide (HFPO) include Chemours, Unimatec, HEXAFLUO, HUANXIN FLUORO, Huaxia Shenzhou New
