Research Summary

Hexane is a hydrocarbon with the molecular formula C_6H_{14} , belonging to the alkane family. It is a colorless liquid with a relatively simple structure, consisting of a straight chain of six carbon atoms, each bonded to hydrogen atoms. Hexane is a highly flammable solvent that is commonly used in various industrial processes, including the extraction of vegetable oils from seeds and the production of glues, adhesives, and rubber. Its low boiling point and ability to dissolve a wide range of compounds make it a popular choice in laboratories and manufacturing. However, it is important to note that hexane poses health and safety risks, and prolonged exposure to its vapors can lead to harmful effects. In recent years, there has been a growing awareness of the environmental and health concerns associated with certain uses of hexane, leading to increased efforts to find alternative, more environmentally friendly solvents in various industries.

The major global manufacturers of Hexane include Shell, Phillips 66, Exxon Mobil, Chevron Phillips Chemical, Bharat Petroleum, SK Chem, Sumitomo, Subaru Corporation, SINOPEC, Yangzi Chemical, Yufeng Chemical, Liangxin Petrochemical,
