Research Summary

HFC (hydrofluorocarbon) refrigerants are synthetic compounds used in various refrigeration and air conditioning systems. Common HFC refrigerants include compounds like HFC-134a and HFC-410A. These refrigerants were introduced as alternatives to chlorofluorocarbons (CFCs) and hydrochlorofluorocarbons (HCFCs), which are known to deplete the ozone layer. HFCs do not contain chlorine and do not contribute to ozone depletion, making them environmentally preferable in that regard. However, HFCs have a high global warming potential (GWP), meaning they can trap heat in the atmosphere and contribute to climate change. The environmental impact of HFCs has led to international efforts to phase down their use. Some countries have started transitioning to low-GWP alternatives, such as hydrocarbons and hydrofluoroolefins (HFOs), to reduce the climate impact of refrigeration and air conditioning systems.

The major global manufacturers of HFC Refrigerant include Orbia, Zhejiang Juhua, Chemours, Arkema, Sanmei, Daikin, Honeywell, Dongyue Group, Sinochem Group,

Meilan Chemical, Linde, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
