Research Summary

High borosilicate glass original sheet refers to a type of glass material characterized by its high boron oxide content, which imparts unique properties such as high thermal shock resistance, excellent chemical durability, and low thermal expansion. This type of glass is commonly used in various industries and applications where these properties are crucial. High borosilicate glass sheets are manufactured using a specific composition that includes boron trioxide (B₂O₃), silica (SiO₂), and other additives to achieve the desired characteristics. The high thermal shock resistance of borosilicate glass makes it suitable for laboratory glassware, cookware, and lighting applications where rapid temperature changes are common. Its excellent chemical durability allows it to withstand exposure to acidic or corrosive substances, making it ideal for chemical processing equipment, pharmaceutical containers, and industrial applications. The low thermal expansion coefficient of borosilicate glass reduces the risk of breakage due to temperature variations, ensuring durability and safety in various environments. Overall, high borosilicate glass original sheets offer a combination of thermal, chemical, and

mechanical properties that make them valuable in a wide range of technical and consumer products.

The major global manufacturers of High Borosilicate Glass Original Sheet include Schott Glaswerke AG, NSG Group, Kibing-Glass, Cardinal, Xinyi Glass, China Yaohua Glass Group, Hebei Fujing Technology, etc. The global players competition landscape in this report is divided into three tiers.
