Research Summary

High Early Strength Cements (HES) are specially formulated types of cement designed to achieve significant strength in a shorter time frame compared to conventional Portland cement. These cements are typically used in applications where early strength development is crucial, such as in rapid construction projects, precast concrete production, and emergency repairs. The formulation of HES involves a combination of finely ground clinker and additional admixtures that accelerate the hydration process, enabling the cement to attain high compressive strength within the first 24 hours of curing. This rapid strength gain not only shortens construction timelines but also enhances the durability and longevity of the structures, making HES an essential material in modern construction practices.

The major global manufacturers of High Early Strength Cements (He) include Mitsubishi Materials, ASO Cement, Cement Australia, Hanson Packed Products, Boral, Adelaide Brighton Cement, St. Marys Cement, CalPortland, Tokuyama, Texas Lehigh Cement, Lehigh Hanson, LafargeHolcim, CEMEX, Quikrete, Cimsa, Breedon, Mapei, Schwenk,
