Research Summary

High-level disinfection is a rigorous and advanced process used in healthcare settings to eliminate or inactivate a broad spectrum of microorganisms on medical devices and instruments, excluding bacterial spores. This level of disinfection is higher than intermediate-level and low-level disinfection and is typically required for critical or semi-critical medical equipment that comes into contact with mucous membranes or breached skin. Common methods for achieving high-level disinfection include chemical agents, such as peracetic acid or hydrogen peroxide, and various advanced technologies like hydrogen peroxide vapor systems or ozone-based systems. The goal of high-level disinfection is to ensure the elimination of pathogenic microorganisms, reducing the risk of healthcare-associated infections. Strict adherence to guidelines and protocols is crucial to maintaining the effectiveness and safety of high-level disinfection processes in healthcare settings.

The major global suppliers of High Level Disinfection include Germitec, Steris, Microbide, GE Healthcare, CIVCO, CS Medical, Altapure, Metrex, Advanced
