Research Summary

High Pressure Processing (HPP) for food is a non-thermal pasteurization technique that uses high pressure to extend the shelf life of fresh and packaged foods while preserving their nutritional quality and sensory attributes. In HPP, food products are placed in a high-pressure vessel and subjected to pressures typically between 300 and 600 megapascals (MPa), which inactivates bacteria, yeasts, molds, and other spoilage microorganisms, as well as pathogens like *Listeria* and *Salmonella*. The process is cold, meaning it does not involve high temperatures that can alter the taste, texture, or nutritional content of the food. HPP is widely used in the food industry for products such as juices, guacamole, deli meats, and seafood, providing an effective method for maintaining food safety and quality without the need for preservatives or excessive heat.

The major global manufacturers of High Pressure Processing (HPP) Food include Hormel food, Espuna, Campofrio Alimentacio, Cargill, Suja Life, Echigo Seika, Universal

Pasteurization, Hain Celestial, Avure Technologies, Safe Pac Pasteurization, Motivait, etc. The global players competition landscape in this report is divided into three tiers.
