Research Summary

High-pressure water mist systems are advanced fire suppression systems that use fine water droplets generated at high pressure to control or extinguish fires. These systems operate by pressurizing water and forcing it through specialized nozzles that atomize the water into tiny droplets. The resulting mist has an increased surface area, allowing for efficient heat absorption and fire suppression. High-pressure water mist systems are known for their effectiveness in suppressing various types of fires while minimizing water usage. They find applications in a range of environments, including industrial facilities, data centers, marine settings, and heritage buildings, where traditional water-based fire suppression systems may not be suitable. The fine mist also reduces the risk of water damage to sensitive equipment and structures. The technology is considered environmentally friendly, as it typically requires less water and poses fewer risks compared to traditional sprinkler systems.

The major global manufacturers of High Pressure Water Mist Systems include Danfoss, Carrier, FOGTEC, Securiplex, Eusebi Impianti, Yamato Protec, Watermist, Aquasys, Tri-
