Research Summary

High-pure gallium is an extremely pure form of gallium metal refined to a purity level of 99.999% or higher. Gallium is a soft, silvery metal with unique properties, such as a low melting point and high electrical conductivity, making it valuable in various technological applications. The production of high-purity gallium involves rigorous refining processes, including zone refining and vacuum distillation, to remove impurities and achieve the desired purity level. High-pure gallium is primarily used in the semiconductor industry for the production of gallium arsenide (GaAs) and other compound semiconductors, which are essential in high-speed electronic devices like microwave amplifiers, solar cells, LEDs, and laser diodes. Additionally, gallium is used in specialty alloys and liquid metal thermal interface materials (TIMs) for cooling electronic devices. Due to its high purity and unique properties, high-pure gallium is a critical material in advanced technology and electronics manufacturing.

The major global manufacturers of High Pure Gallium include DOWA Electronics, Vital Materials, Zhuzhou Keneng New Material, Beijing Tongmei Xtal Technology, East
