Research Summary

High purity boehmite refers to a refined form of boehmite, an aluminum oxide hydroxide mineral. The term 'high purity' indicates that the boehmite has undergone extensive purification processes to eliminate impurities, resulting in a material with elevated levels of purity. Boehmite itself is commonly found in bauxite ores and serves as a precursor in the production of various aluminum-based materials. High purity boehmite finds applications in industries where the presence of impurities can impact the performance or quality of the final product. It is often used as a catalyst support, in the production of advanced ceramics, and in materials science research where precise and pure aluminum oxide compounds are essential. The production and handling of high purity boehmite involve stringent quality control measures to ensure that the material meets the specific purity standards required by industries that rely on such specialized substances.

The major global manufacturers of High Purity Boehmite include Nabaltec, Anhui Estone Materials Technology, Zhengzhou Research Institute of Chalco, Sasol,

Shandong Sinocera Functional Material, Shanghai Putailai New Energy Technology, TOR Minerals, Kawai Lime Industry, TAIMEI Chemicals, Dequenne Chimie, Osang Group, Silkem, KC, Henan Tianma New Material, Shandong Higiant High-Purity Alumina Technology, etc. The global players competition landscape in this report is divided into three tiers.
