### Research Summary

High-purity electronic grade potassium hydroxide (KOH) is a specialized form of potassium hydroxide tailored for use in the semiconductor industry, particularly in the production of electronic components. It is manufactured to extremely high purity levels to meet the stringent requirements of semiconductor fabrication processes. Electronic grade KOH typically has impurity levels in the parts per billion (ppb) range, ensuring minimal contamination of semiconductor materials during processing. This high purity is essential for maintaining the integrity and reliability of semiconductor devices. Electronic grade KOH is used in various semiconductor manufacturing steps, including wafer cleaning, etching, and surface treatment. It plays a critical role in removing organic and inorganic contaminants from silicon wafers, enabling precise patterning of semiconductor features. Additionally, electronic grade KOH is often supplied in liquid or solid form, depending on the specific application requirements.
