### Research Summary

High Solids (Greater than 60%) SBR refers to a type of Styrene-Butadiene Rubber with a polymer content exceeding 60%. SBR is a synthetic rubber copolymer consisting of styrene and butadiene monomers. The term "high solids" indicates a rubber compound with a higher concentration of polymer content, typically achieved through a specialized manufacturing process. High solids SBR is valued for its improved mechanical properties, such as higher tensile strength and abrasion resistance, making it suitable for various applications in the rubber industry. This type of SBR is commonly used in the production of tires, conveyor belts, gaskets, and other rubber products where enhanced durability and performance are essential. The increased solids content contributes to the overall strength and resilience of the rubber material, providing advantages in applications requiring robust and long-lasting rubber compounds.

The major global manufacturers of High Solids (Great than 60%) SBR include Synthomer, Goodyear Tire and Rubber Company, BASF, Kumho Petrochemical, Versalis (Eni), Ultrapave Corp, Arlanxeo, Shandong Chambroad Petrochemicals, etc.
