Research Summary

A High-Speed Direct Attach Copper (DAC) cable is a type of high-speed data transmission cable commonly used in data centers and high-performance computing environments to connect networking equipment such as switches, routers, and servers. The cable consists of copper conductors enclosed in a protective sheath, typically made of PVC or a similar material. DAC cables are designed to transmit data at high speeds, typically up to 100 gigabits per second (Gbps) or more, over short distances, typically within a data center rack or between adjacent racks. They provide a cost-effective and efficient solution for high-speed data transmission compared to traditional optical fiber cables, offering lower latency, reduced power consumption, and simplified installation. DAC cables are available in various lengths and form factors, including passive and active configurations, to meet the specific requirements of different networking applications.
