Research Summary

Hip protectors are wearable devices designed to reduce the risk of hip fractures in individuals, particularly the elderly, who are at a higher risk of falls. These protectors typically consist of specialized padding or shields strategically placed around the hip region. The padding is designed to absorb and redistribute the impact force in the event of a fall, providing an extra layer of protection to the vulnerable hip bones. Hip protectors are commonly used by older adults, especially those residing in assisted living facilities or nursing homes, where falls can have serious consequences. The intention is to mitigate the impact forces that may lead to hip fractures, a common and often debilitating injury in the elderly population. While hip protectors may not completely eliminate the risk of fractures, they can contribute to reducing the severity of injuries resulting from falls and, in turn, improve the overall safety and well-being of individuals at risk.

The major global manufacturers of Hip Protectors include Tytex, Medline, Kaneka, Patterson Medical, Suprima, Skil-Care, AliMed, Bort, HipSaver, Plum Enterprises,
