### Research Summary

Hipot, short for high potential, is a type of electrical safety test that assesses the insulation integrity and dielectric strength of electrical devices and components. Electrical safety testers, often referred to as hipot testers, are specialized instruments used in this testing process. The primary purpose of hipot testing is to identify potential weaknesses or faults in the insulation of electrical equipment that could lead to electrical shock or other safety hazards. During the test, a high voltage is applied between different points of the device, and the tester measures the current flow. If excessive current is detected, it indicates a potential insulation breakdown. Hipot testing is crucial in ensuring that electrical equipment complies with safety standards and regulations, reducing the risk of electrical accidents and improving the overall safety of electrical products in various industries.

The major global manufacturers of Hipot & Electrical Safety Testers include HIOKI, Phenix, Ikonix, Megger, Seaward, Sefelec, Chroma ATE, Haefely Hipotronics, Compliance West, GW Instek, Kikusui, Vitrek, HVI, etc. The global players competition
