Research Summary

Hirudin is a naturally occurring anticoagulant, or blood-thinning substance, found in the saliva of medicinal leeches, particularly *Hirudo medicinalis*. This enzyme plays a crucial role for leeches in preventing blood clotting during feeding, allowing them to consume blood from their hosts. Hirudin has been studied for its anticoagulant properties and has therapeutic applications in medicine. Due to its ability to inhibit thrombin, a key enzyme in the blood coagulation process, hirudin has been used in anticoagulant medications and research related to blood clotting disorders. In the medical field, synthetic forms of hirudin, known as hirudin analogs, have been developed to achieve anticoagulation without the need for using live leeches, providing a safer and more controlled approach to managing clotting disorders and certain medical conditions.

The major global manufacturers of Hirudin include The Medicines Company, Keyken, Minapharm, Abbott, SALUBRIS, Pfizer, Inc, Teva Pharmaceutical Industries Ltd, Pentapharm, DUOPUTAI, etc. The global players competition landscape in this report is divided into three tiers.
