### Research Summary

Histidine is one of the 20 standard amino acids that serve as the building blocks of proteins. It is an essential amino acid, meaning that the human body cannot synthesize it and must obtain it from the diet. Histidine plays crucial roles in various biological processes, including the formation of hemoglobin, the maintenance of pH balance in cells, and serving as a precursor for the synthesis of histamine, a molecule involved in immune responses and inflammation. Histidine contains an imidazole ring, making it unique among the standard amino acids. Foods rich in protein, such as meat, fish, dairy products, and certain grains, are sources of histidine. In addition to its role in protein synthesis, histidine is also involved in enzymatic reactions and is a component of metal-binding sites in some metalloproteins.

The major global manufacturers of Histidine include Kyowa Hakko Bio, Ajinomoto, Shine Star Biological Engineering, KingYork Group, Huaheng Biological, etc. The global players competition landscape in this report is divided into three tiers.
